

Data from <http://ship.no-ip.org> as of 28 April 2007.

These are all the “**Outside**” (“Ambient Air”) values reported for TCE. No statistical claims are made as to the validity of comparing the first two rounds (some of which tests used a threshold value of 0.82) with later rounds where a threshold of 0.218 was used exclusively. The relative number of detects within the properties reported speaks for itself.

Indoor I, Fall 2004 (2 detects out of 15 tests)

LEVEL	THRESHOLD	ADDRESS	DATE
3.8	0.82	430 S Geneva St	19 Oct 2004
